Ph.D. Programme in Gender Studies, Batch of 2020-2021

SYLLABUS STRUCTURE

Gender plays a major role in structuring societies. It is also an innovative concept that grasps sexual differentiation and the reproduction of inequalities between men and women in an increasingly numerous and varied number of fields. The development of a genuine interdisciplinary approach around these questions has contributed to the emergence of an impressive range of theories and methods. If, in theory, any situation or phenomenon is likely to be the subject of a gender analysis, the choice and establishment of a method is certainly an issue.
